## Screenless Granulators

## Technical Specifications

**Sterling's S10 Series Screenless Granulator** is known for its high quality regrind in sprue and runner reclaim applications. The S10 Series Granulator has a very low rpm speed rotor helping to reduce waste by providing clean regrind to reuse in your process, and allows for energy savings. Stainless steel parts clean up fast and reduce maintenance costs. This compact footprint granulator will easily fit into your process flow.

### Features

#### LOW NOISE

- Sound proof steel hopper results in less noise pollution.
- Low rotor RPM also contributes to less noise made within the chamber.

#### LOW DUST

- Rotating blade uses stainless steel, produces uniform grain size and minimizes powder formation.

#### ENERGY EFFICIENCY

- Newly designed cutter allows for energy efficient, consistent granulation while using less horsepower.

#### Standard Features

- Small Overall Footprint
- Quiet Operation
- Less Energy Consumption  
(smaller motors with same or larger throughput capability)
- Easy Maintenance and Access
- Fast Cleaning
- Improved Knife Design (Staggered cutter design for industry leading efficiency and regrind quality)
- Superior Regrind Quality, with Less Dust Generation
- Vacuum Take-Off Tube Can Be Rotated 360 Degrees
- 3-Window Hopper
- Ferrous Magnet Protection (To prevent stray metal from being introduced into your process)
- Low Speed Rotor RPM in Conjunction with Superior Rotor Design Minimizes Dust and Produces Uniform Regrind Size
